

Mario Cigada

Mario Cigada is a doctor, ophthalmologist and psychotherapist. He has a firm belief that statistics is now an indispensable tool for the advancement of knowledge, for the simple reason that the discoveries that were capable of being made without taking into account uncertainty have already been made. This belief, combined with a great love for games, led him to look for a playful approach to the basic concepts of statistics.

Without pretending to provide a full and complete discussion of statistics, in these pages he guides readers towards even quite complex mathematical concepts in a fun and light-hearted way.

Topics covered: mean and standard deviation, statistical distributions, the concept of statistical tests, the reliability of measurements, analysis of variance, and regression.
