Example: let obj = { name: 'abc', age: 45, // More properties here } lodash's get method would give us: // Object { name: "abc", age: 45 } Is there any way I can just get properties without key? So I want to get the properties named as the property, instead of the property key. Also, lodash's get method should not alter the original object. How can I do this? Thanks. A: You could use flatMap (or flat) to flatten the properties of an object: const obj = { name: 'abc', age: 45, foo: 42 }; console.log( \_.flatMap(obj, (value, key) => [key, value]) ) //=> [{"name", "abc"}, ["age", 45], ["foo", 42]] Note that we don't pass an additional second argument to flatMap, but just reference the first item in the array, since we only use the value.
