What's New In FNR Tool?

FNR Tool is a free file and folder maintenance app from 3in1 Software. It's designed to assist you in detecting and fixing file and folder errors, which could be a result of unsaved changes, internet connection issues, and a number of other factors. FNR Tool has

more than 20 built-in tasks designed to take care of different troubleshooting needs. This tool includes a range of tasks including folder file recovery, folder file restore, file recover, file history, file password retrieval and file verify. Furthermore, there are two new features available with this app: the “FNR Tool Check and Fix Temp Files” and the “FNR Tool Clean Browser Hijack”. If you get any errors while attempting to perform a file search, this app will provide you with an instant fix, which should get you back on your way. It will detect and report any errors associated with both

windows files and folder locations, so you can see what's missing. Based on the given troubleshooter, FNR Tool will scan for any temporary files that are incorrect, therefore providing users with a preview of the amount of temporary files. This, in turn, gives you the chance to quickly fix the issue before it becomes any more serious. Users are given the choice of whether to automatically do a reboot or not. If you choose not to reboot, users will have to wait until the reboot process is complete. Once this is done, it will finally allow you to restart the machine. FNR Tool also makes it

easier to find and delete suspicious browser hijack cookies, by enabling you to easily find and remove cookies. Additionally, users can also run the app's built-in troubleshooter, which will detect and automatically fix the refresh issues, following the operation with a PC reboot. Furthermore, if one also requires system maintenance operations, FNR Tool offers two separate options for that. One will involve the cleaning of temporary files and one cleaning of potential browser hijack. Cleaning the temporary data is preceded by a short report, which allows users to preview the amount of

general temporary files, as well as Windows-specific temporary files, both displayed in MB. Last but not least, after the cleaning process, the amount of remaining temporary data will be updated, therefore letting you know of any remainders.
