Covadis. GCR: 7261; IPR: 201323304; DTD: 2013;. CHAN Number: 11904505; Language: eng; Registered On: April 14, 2013, 3:15 am. This is very simple trainer released by AikonCWD for the simulation game. MOSCOW “ Topless girls, Russian model nudes,..The present invention relates to a method and apparatus for transmitting audio signals by way of a wireless communication system. In particular, the present invention relates to a method and apparatus for the transmission of audio signals through a code division multiple access (CDMA) communication system. The CDMA wireless communication system has been well known for a long period of time, and its development has progressed rapidly over the past several years. The CDMA system has been standardized by the organization called TIA/EIA. This organization is called IS-95, and the standardization is typically described in the document entitled “TIA/EIA Interim Standard”, version 2, TIA/EIA/IS-95-A to C, 1993 and in the document entitled “Dual Mode Mobile Station-Base Station Compatibility Standard for Dual Mode Wideband Spread Spectrum Cellular System”, TIA/EIA/IS-95-D, 1995. This standardization is becoming more advantageous in the market of the mobile communication systems inasmuch as the CDMA system has many features in terms of high-rate data transmission, reliability in transmission and reception, and a handover function. The prior art CDMA wireless communication systems are known to be a cellular system in which a mobile station communicates with a base station by way of codes having a sequence of the same pattern, and thus, it is possible to implement a soft handover even when the mobile station moves. However, in order to implement such a CDMA communication system, the same codes are assigned to the base stations and the mobile stations so that it is only the base station, in which the mobile station is currently communicating, that is able to receive the data. In this case, a data receiving time is delayed by the time spent to receive the data through the other base stations. Accordingly, the prior art CDMA wireless communication systems have a problem of a reduced rate of data transmission due to the increased data receiving time. The CDMA communication
