decode n-channel input from Audio Units, Audio drivers and Audio Streams. The effect is used for splitting mono or stereo input into n-channels. The number of channels is defined by the user. KEYMACRO Description: Split/Merge input channels into n channels. A VST/AU plugin for Audio Units, Audio drivers and Audio Streams that allows an input to be sent to a number of outputs. The inputs can be routed to either Front Left, Front Right, Back Left, or Back Right, all at the same time. The outputs are equally spread out in Front, Rear and a full-range spectrum. KEYMACRO Description: Sends signal to several output. Allows the audio mixer to hold audio at any point. It lets you drop or bypass audio from the output. This is great when you want to do some tweaking on the monitor mixes, and don't want to lose any output. KEYMACRO Description: Holds audio at any point. Mixer Previews have a habit of getting destroyed when changes are made to them. However, this doesn't happen if the Preview is played normally (ie. not silent). This effect emulates this behavior. KEYMACRO Description: Previews hold audio at any point. An Audio Unit VST AU plugin that allows the user to detect certain WAV file types. It does this by checking for the Magic Number to see if the sample data is uncompressed. KEYMACRO Description: Detects file types 1d6a3396d6
