Adobe Photoshop CS4 Extended: This version of the program may be the most powerful Photoshop available and includes special features such as creating 3D text. **Adobe Photoshop Elements:** Photoshop Elements is a product in the same family as Photoshop, but it's relatively inexpensive. It lacks some of the powerful features of the CS series, but it's the affordable option if you have a lot of small pictures or graphics to deal with. **Adobe Photoshop Lightroom:** Lightroom is part of the imaging package that LightWave previously sold with LightWave 3D Studio. It is a powerful alternative to Photoshop if you want to get good at editing individual images, and you want a catalog that can be shared among multiple users, as well as to control the printing of images through an onscreen layout that resembles that of a magazine. **Adobe Photoshop Match:** This program, a lightweight version of Photoshop, can replace programs such as Picasa to view and edit images that are stored in digital photo albums created in the program. It gives you easy access to your images by automatically placing them on the desktop in a folder. It is a good place to start if you are new to editing. **Adobe Photoshop on the Web:** This is one of the best ways to learn and practice your skills in Photoshop. The fact that you can easily practice on the web makes it accessible to anyone with access to the Internet. After the tutorials and practice options, you can pay a monthly or yearly fee and get your own site where you can download your images or do some image production and display them. **LightWave 3D:** This program uses LightWave 3D technology to create 3D image models. It is used for creating games and other 3D graphics that can then be imported into Photoshop. It is also used for creating 3D models and images for print.

At least 25 killed, 1000 homes damaged in bushfires The fires were still burning out of control on Tuesday morning, with life flight helicopters still preparing to evacuate the injured while crews battled to extinguish the flames. Around 450 firefighters were on the ground, with more planes on standby, as volunteer groups coordinated their efforts. The Brisbane Airport fire had grown significantly overnight, with the DFO requesting the airport close its runway for several hours, thus affecting many arrivals and departures. By 7.50pm AEDT, the fire was still burning strongly in bushland to the north of Brisbane Airport, after fanned by strong wind gusts which were complicating containment efforts. More than 20 homes were gutted by the fires - and the Lion Creek Restoring of Bushland Group has begun a major clean-up operation, delivering teams of volunteers to the site to collect as much rubbish as possible before clearing the area. Mick Noye, a volunteer with the group, said several small fires had started after the blaze. One resident at Windsor/Yatala, which is next to the airport, said she could hear the roar of fire engines as they continued to battle the out-of-control blaze. "It got busy again about 4pm, the fire was intense," she said. "There's a lot of fire trucks here." However, a Brisbane Airport spokesman said the airport was still open. "We still have two runways open at this time," he said. "We are still receiving arrivals and one of the runways was cleared to land right at 5pm [AEDT] yesterday." At this stage we have a fully functioning terminal, with service to our regular domestic and international flights." The DFO says it has asked airlines and visitors heading to the airport on Tuesday to check their flights with their airline for any changes. All Queensland airports and major roads are open as usual, and the Australian Transport Safety Bureau confirmed there were no reports of any deaths or injuries on roads after the bushfires. Federal Transport Minister, Darren Chester, has called for anyone in the fire affected area to remain calm and avoid engaging in bushfire survival. "There are no immediate plans to evacuate any communities at this time and people should remain inside their homes during daylight hours," he said. As the bushfires continued to burn through the night into Tuesday morning, At

I was recently thinking about some file systems we use on computers nowadays, and it struck me that we can store all the images from earth to mars with just under 20 pages of 16KB files. The reason I think we could do this is because you can only say the human race has created more than 3 billion images with our current file systems. But just consider the xbox 360 uses a 256 bytes/4KB (and I say xbox 360 because it can be repeated for other consoles) and a Xbox 360 has easily a gig of storage for 2 million 360 titles. So the only way to even come close to this problem is to have a file system that is basically a fat filesystem that can easily fit in the memory, and in the future can have redundancy and more storage. So let's look at some file systems ExFAT support is coming to every new xbox and ps3. It is designed to be full-featured and useful for massive amounts of data, something that you can fit in 256 bytes. Now since it supports files larger than 2MB, does this mean it would take up less space than our current FAT32? Flash Memory is basically 2D ROM to which a certain address can assign a bit that has either a 1 or a 0 to be placed in that
