violated tradition. At the time, there were many criticisms that this book violated tradition.(1)

Field of the Invention The present invention relates to a heat-sensitive recording material, and more particularly to a heat-sensitive recording material which can provide a reproduced image having excellent fastness and color developing properties. (2) Description of

the Prior Art There are three processes for recording letters, figures and the like: a thermosensitive recording process which uses a

heat-sensitive recording material of the type wherein a heat-sensitive color-forming material, which is colorless or slightly colored in the normal state, is caused to react by the action of heat or pressure to form a color, a liquid ink

recording process which uses a liquid ink recording material of the type wherein a liquid ink is applied to the surface of a substrate and then dried or fixed, and a dry paper recording

process which uses a dry paper recording material of the type wherein an image is formed by directly applying or printing a substance which can form an image, on the surface of the paper. Of these three processes, the thermosensitive recording process has an

---

excellent thermal head-operated recording property, since the recording can be conducted by the action of heat or pressure alone, and is capable of recording letters and figures of excellent quality. Also, the thermosensitive recording material is inexpensive and is therefore widely utilized in facsimile apparatus and word processors. However, the thermosensitive recording material has a disadvantage in that the obtained image has a low fastness
