Limitations: ☐ limited to 20 uses Important notice: All texts, concepts, pictures and any other content on this WAPT website are protected by copyright laws. No rights can be transferred without our consent (only in case of a license for the website). You may not republish, distribute, modify or distribute copies of our texts without our consent.The present invention relates to a novel piezoelectric actuator and, more particularly, to a semi-hermetic piezoelectric actuator. In the present state of the art, there are several types of semi-hermetically sealed engines that have been designed. This is due to the fact that there has not been a suitable fuel cell system which allows a vehicle to be a multi-fuel means of transportation. For example, there are several types of engines, one being a hermetically sealed engine which is designed to run on gasoline, hydrogen gas, and electric power. This type of engine typically involves a gasoline tank, a hydrogen gas tank, a hydrogen fuel cell and an electric generator. The engine is typically suited for use on a land-based vehicle since it is impractical to utilize a
