A: I think that the installation of a Macro/LNK File in the %SYSTEM32%/ksmspi directory is the key problem. I had the same Problem and only after i deleted the LNK File the error went away. This is how the LNK File looks like: I guess that the LNK File is made the wrong way because the installer doesnt know how to handle the macro-files that are downloaded as a compressed file. If you are downloading the Zip File there is another way of solving your problem. You can download the LNK files from the Microsoft Website or you can download the LNK files from a forum at Kaspersky like this. Just follow the procedure at the other forum. Copy and paste the downloaded PKSK_WIN10_UAT.lnk file in the %SYSTEM32%/ksmspi directory Reboot the system The solution was tested on Windows 7 and Windows 10 Note: Before doing this procedure i did an installation of Windows 10 using the Microsoft tool "Windows 10 with Pro" (the user has the time to follow the procedure). Tag: fitness It's been almost a year since I have been involved in a fitness program. I have gone from being a "sane" woman who has been fit for almost 18 years now, to some fat trainee. I have been dieting and eating right for a year and a half now and have hit a wall... a big fat wall. I have lost 50 pounds and gained a handful of back and hip fat in the process. The pounds don't seem to want to leave. I am trying to figure out if this is a weight loss thing or just my body being a fat ass and holding on to its weight. It has a lot to do with the fact that I have never been that overweight in my life. I will probably need to give up on the fitness/diet thing for a while, but I am glad that I can still walk and climb stairs. I wouldn't have been able to if I had done that a year ago.Q: Django model saving with AutoField I have a model defined as follows: class Foo(models.Model): """ Stores arbitrary data for an object.
