For more advanced editing, you may be better off considering alternatives or using another (and free) software package. Photoshop's windowed mode is similar to other graphics-editing applications. In most Windows versions of Photoshop, the application window is divided into the various tools that are used for editing. [Role of pulmonary fibrosis in the pathophysiology of chronic QTc dispersion]. We examined the relationship between right ventricular (RV) electromechanical dyssynchrony and repolarization inhomogeneity to understand the pathophysiology of a prolonged QTc dispersion (QTcd). Patients with HF were evaluated for RV dyssynchrony using the tissue synchronization imaging (TSI) and RV repolarization inhomogeneity was assessed using the conventional 12-lead electrocardiogram, and the QTcd was calculated as the difference in the maximum and minimum corrected QT interval (QTmax-QTmin). Patients (n = 56) were divided into two groups: 13 with HF with reduced ejection fraction (HF-R) and 43 with HF with preserved ejection fraction (HF-P). Compared with HF-P, HF-R exhibited a smaller QTcd (81 ± 37 ms vs 110 ± 31 ms) and a higher correlation coefficient between the maximum TSI time delay and QTcd (0.739 vs 0.547) while the correlation coefficient between the maximum TSI time delay and RV preejection period (PEP) was higher in HF-P (0.385 vs 0.063). The correlation coefficients between QTcd and RV preejection period/systolic dyssynchrony were higher in HF-P (0.418, 0.325) than in HF-R (0.258, 0.207). HF-P showed a higher prevalence of rapid repolarization, prolonged PEP and no PV block than HF-R. RV repolarization inhomogeneity may be important in the pathophysiology of prolonged QTcd, but not in the pathophysiology of QTc dispersion in HF-P.Q: How to install Ruby on Rails development tools on IIS 6.0?
