We appreciate your interest in MS Excel, so we will start with the basics of a basic Windows Excel installation on a PC running the Windows XP operating system. This will walk you through the installation process of Microsoft Excel 2007 if the software has not already installed on your computer. If you want to create a new Excel file, use the New command (Ctrl+N) in the Office ribbon. After you create the new Excel file, you will be able to do the following: Write new worksheets Add rows and columns Copy cells from one cell location to another cell location Use the functions in cell formulas Delete rows and columns Tabulate information into column or row order Write formulas to cell locations Format numbers or dates in cells Change cell color Write in Spanish, French, German, Chinese, Italian, Japanese, or Korean characters If you are unable to make the above list of actions work correctly for you in Excel, please return to this webpage to read through our troubleshooting guides to help you fix this problem. Learn More at our MS Excel Support Page Please note that all the latest versions of Microsoft Excel are fully compatible with the Microsoft Windows Operating System. With the latest version of Microsoft Excel, we have been able to add two more functions. One of these additional functions allows you to use a currency symbol in any text in your worksheets and the other updates one of the previous function to include a Spanish language character. Microsoft Excel 2007 is available as a free download on the Microsoft website. The Microsoft Office 2007 zip file can be opened with the Windows OS by opening the compressed file and launching the setup program from the Start menu. If you have the requirement to install Excel 2007, we hope that this guide is helpful to you and that you find it helpful in the future.
