Go to "C:\Program Files\Autodesk\R20" and copy the.scf and.kdb files Start Autodesk Autocad and when asked click yes to override the files with the new ones. Then it will ask for the licence file, just click save and done. Hello I was wondering if anyone knows how to create a.kdb file for an.scf file in Autocad? Or if they can tell me how to install the Autocad side of the licence file? I am currently trying to use an alternative but it only works in ABA mode. I was wondering if anyone can help me? I have just recently installed it and installed the Free version, I was using ABA before and now I get a error when I try and open a drawing from a source file, it will crash if I don't open the source file before I open the drawing from the file. I have tried to put the.kdb file in C:\Program Files\Autodesk\R20\CurrentModel\File but the.scf file won't show up in the programme and its still in ABA mode. I was wondering if anyone could help me or tell me where to go from here? I have been having the same problem, I only have a 16-bit key and can't open source model files, I have just read through all the threads on here and did not see any solutions to my problem, and it's quite frustrating that they keep bringing back this old thread, so I thought I would post what I have done to try to solve this problem, which I have now been trying to do for three days, so if anyone has any solutions they could please let me know? Hi, I am looking for a way to convert my files, I am looking for a conversion tool, and found this one, It seems to be able to convert from almost every source file type into a scf file. However, when I click the convert button it crashes, I have a Windows 10 and autocad 2016, I have read through all of the threads on here and nothing seems to work, any ideas on how to fix this? I am trying to convert my files from ABA and most likely this is the reason it crashes because its is a 32 bit application that will not work on my 64 bit machine. A lot of Autocad users are looking for a Windows solution but the Autocad script
