Q: How to parse this string with ShellExecute in VB6? I'm trying to understand if I can use ShellExecute to be able to run an exe in my.bat file. I get a message error saying the PID's don't match. Even though they do. I want the.bat file to call the exe with an argument of -arg1. Here is the code: Private Declare Function ShellExecute Lib "shell32.dll" Alias "ShellExecuteA" (_ ByVal hwnd As Long, ByVal lpOperation As String, ByVal lpFile As String, ByVal lpParameters As String, ByVal lpDirectory As String, ByVal nShowCmd As Long) As Long Private Const SW_NORMAL = 1 Private Sub Command1_Click() Dim bOK As Boolean bOK = ShellExecute(0, "C:\Hanckel\M^D\New Win 7\win_perf.bat", "-arg1", vbNullString, vbNullString, SW_NORMAL) MsgBox "exit code = " & bOK End Sub A: You cannot use a batch script that calls a program as a regular Windows application. WinExec is probably what you need. Like wscript.exe or cscript.exe. Public Const SW_NORMAL = 1 Public Const SW_RESTART = 4 Sub Command1_Click() Dim bOK As Boolean Dim str As String str = "C:\Hanckel\M^D\New Win 7\win_perf.bat" bOK = ShellExecute(0, "C:\WINDOWS\system32\wscript.exe", str, vbNullString, vbNullString, SW_RESTART) If bOK Then 0cc13bf012

As there are many authors and publishers of books on Partial Differential Equations, we have decided to give a brief review of a book by Ian Sneddon, published. 14,15,16,17.Q: AlertDialog works in EditTextField but not in ButtonField. How come? I was playing

around with some layouts and came across a problem. My app has a regular `EditText`Field and a `ButtonField` which should behave like a `AlertDialog`.

What is the difference between the two fields which makes the `AlertDialog` working in the former but not in the latter?
