Macroeconomics by N. Gregory Mankiw. has been a user of LÃneas Editorial since 23 December 2011. Convertitelo a Windows: Macbooks y keynotes. Las encuestas de personas que no.Q: Why Xcode shows that 'Heap' has a lower limit of 4Gb on 64-bit? In Xcode, in the "Process Heap" window, for a 64-bit build (I'm using OSX Lion), the "Heap" can go up to 4Gb. If I set the "Heap" to 2Gb, then the image is displayed as if the 2Gb are "remaining". The image says: 'Using 2.7Gb of 2.8Gb'. Why? I found that it has to do with the size of the image, which seems correct. However, for an application that I'm making, and I use the target "Simulator" to run the application, the "Heap" space setting is 1.5Gb. Why? Does this depend on the OSX version? A: The "Heap" here refers to the amount of RAM your app is asking for, most of which is unused in the simulator. It doesn't really have any effect on the amount of RAM your app will use once running on real hardware. However the amount of RAM in the simulator is fixed, and as you are seeing, is limited to 2Gb. On a side note, while the overall amount of memory used by an app is normally a function of the static allocation requests, the simulator's RAM model probably doesn't have a limit on the total of all malloc() requests. # Created by: Po-Chuan Hsieh # \$FreeBSD\$ PORTNAME= aws-sdk DISTVERSION= 2.151.0 CATEGORIES= devel PKGNAMESUFFIX= 2 MAINTAINER= sunpoet@FreeBSD.org COMMENT= Amazon Web Services Tools for Go SDK LICENSE= APACHE20 LICENSE\_FILE= \${WRKSRC}/LICENSE BUILD\_DEPENDS= \${RUN\_DEPENDS} RUN\_
